DETAILED ACTION

Response to Amendment

1. The amendment filed on 7/11/2005 has been entered and acknowledged by the examiner.

Response to Arguments

2. Applicant's arguments with respect to claims 1-2, 4-10 and 26-28 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2831

4. Claims 1-2, 4-10 and 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Block et al. (US 6,737,728) in view of Jeon et al. (US 6,753,221).

Regarding claim 1, Block et al. disclose a thin layer element comprising a capacitor with a dielectric layer (258) made of a metal oxide, and at least one protective insulating layer/ILD (266) made of a cured resin, in which a barrier layer (264) comprising a non-conductive inorganic material (silicon nitride, column 7, lines 39-40) being provided between the capacitor and the protective insulating layer/ILD (figure 12).

Block et al. lack the barrier layer is a material having the same thermal expansion coefficient as that of the dielectric layer.

Jeon et al. teach a barrier layer and a dielectric comprising TiO₂ (column 4, lines 19-21, and lines 45-46). (Examiner noted that the barrier layer and dielectric layer of Jeon et al. having the same thermal expansion coefficient, since they both made of the same materials).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the dielectric and barrier layers as taught by Jeon et al. in Block et al., in order to avoid problems interlayer peeling and high reliability for the capacitor.

Regarding claim 2, Block et al. disclose a thin layer capacitor element comprising a substrate (252) having formed thereon a capacitor with a dielectric layer (158) made of a metal oxide (tantalum oxide, column 7, lines 5-6), in which a barrier layer (264) comprising a non conductive inorganic material (silicon nitride, column 7, lines 39-40) being covering at least the top and side of the capacitor (figure 12), and at least one

Art Unit: 2831

protective insulating layer/ILD (266) made of a cured resin is formed on the barrier layer.

Block et al. lack the barrier layer is a material having the same thermal expansion coefficient as that of the dielectric layer.

Jeon et al. teach a barrier layer and a dielectric comprising TiO₂ (column 4, lines 19-21, and lines 45-46). (Examiner noted that the barrier layer and dielectric layer of Jeon et al. having the same thermal expansion coefficient, since they both made of the same materials).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the dielectric and barrier layers as taught by Jeon et al. in Block et al., in order to avoid problems interlayer peeling and high reliability for the capacitor.

Regarding claim 4, the teaching of Block et al. in view of Kirlin includes the barrier layer has the same composition as that of the dielectric layer (Kirlin disclose column 5, lines 19-21 and Block disclose column 7, lines 5-6).

Regarding claim 5, Block et al. disclose the barrier layer (264) is silicon nitride (column 7 lines 40-41).

Regarding claim 6, Block et al. disclose the barrier layer is amorphous (figure 12).

Regarding claim 7, Block et al. disclose the dielectric layer comprises a composite metal oxide comprising at least one metal selected from tantalum (Ta) (column 7, lines 5-6).

Art Unit: 2831

Regarding claim 8, Block et al. further disclose the terminals (101 & 102) for external electrical connection provided at least at a location other than the edge of one side of the package (figure 1).

Regarding claim 9, Block et al. disclose a plurality of capacitors with different capacitances are provided in one thin layer capacitor element (figure 2).

Regarding claim 10, Block et al. disclose the capacitor is formed on the substrate (not shown) via an adhesion layer (110) having the same material composition as that of the barrier layer (figure 1).

Regarding claim 26, the method steps are necessitated by the device structure as it is disclosed by Block et al. comprising a capacitor (figure 12) with a dielectric layer made of a metal oxide (tantalum oxide, column 7, lines 5-6) and at least one protective insulating layer/ILD (266) made of a cured resin, which comprises the steps of:

- forming a capacitor (figure 12);
- forming a barrier layer (264), from a non-conductive inorganic material, on the capacitor; and
 - forming at least one protective insulating layer (266) on the barrier layer (264) so that the capacitor and the protective insulating layer is separated from the barrier layer.

Block et al. lack the barrier layer is a material having the same thermal expansion coefficient as that of the dielectric layer.

Jeon et al. teach a barrier layer and a dielectric comprising TiO₂ (column 4, lines 19-21, and lines 45-46). (Examiner noted that the barrier layer and dielectric layer of

Art Unit: 2831

Jeon et al. having the same thermal expansion coefficient, since they both made of the same materials).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the dielectric and barrier layers as taught by Jeon et al. in Block et al., in order to avoid problems interlayer peeling and high reliability for the capacitor.

Regarding claim 27, the method steps are necessitated by the device structure as it is disclosed by Block et al. comprising the steps of:

- forming a capacitor with a dielectric layer (158, column 7, lines 5-6), from a metal oxide, on a substrate;
- forming a barrier layer (264), from a non-conductive inorganic material, to cover at least the top and side of the capacitor; and
- resin on the barrier layer so that the capacitor and the protective insulating layer is separated from the barrier layer.

Block et al. lack the barrier layer is a material having the same thermal expansion coefficient as that of the dielectric layer.

Jeon et al. teach a barrier layer and a dielectric comprising TiO_2 (column 4, lines 19-21, and lines 45-46). (Examiner noted that the barrier layer and dielectric layer of Jeon et al. having the same thermal expansion coefficient, since they both made of the same materials).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the dielectric and barrier layers as taught by Jeon et al. in Block et al., in order to avoid problems interlayer peeling and high reliability for the capacitor.

Regarding claim 28, Block et al. further comprises the step of forming the dielectric layer by a sputtering method/etching (column 11, lines 24-25).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen T. Ha whose telephone number is 571-272-1974. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on 571-272-2800 ext. 31. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
